

ABSTRACT

Provided is a flame-retardant polycarbonate resin composition comprising (A) from 90 to 99.98 % by weight of a polycarbonate resin, (B) from 0.01 to 5 % by weight of an acid base-containing aromatic vinyl resin, and (C) from 0.01 to 5 % by weight of a drip inhibitor, wherein the expression of % by weight is based on the total weight of (A), (B) and (C). The drip inhibitor is preferably a fibril-forming polytetrafluoroethylene. Not containing halogen, the resin composition has the advantages of good impact resistance, heat stability and wet heat stability that are intrinsic to polycarbonate resin, and is recyclable and resistant to static electrification.
